### What does the Fund invest in?

The Fund invests primarily in publicly-traded equity securities of companies based outside of Canada and the United States. Security selection within the portfolio follows a bottom-up approach, which emphasizes careful company specific analysis. This involves evaluating the financial condition, management and prospects of each company, its industry and the overall economy. The Portfolio Manager typically emphasizes a value investment approach to select stocks. Valuation measures such as price-to-earnings and price-to-cash flow will be considered relative to a firm’s growth prospects. The Portfolio Manager will focus on quality companies with stable, growing businesses and strong balance sheets and will select companies that offer the potential for future growth in earnings and/or cash flow. Fundamental analysis is supplemented by quantitative techniques, which identify potentially attractive securities based on a combination of attributes in areas such as valuation, growth, profitability, momentum and risk.

**How risky is it?**

The value of the Fund can go down as well as up. You could lose money.

One way to gauge risk is to look at how much a Fund's returns change over time. This is called "volatility".

In general, funds with higher volatility will have returns that change more over time. They typically have a greater chance of losing money and may have a greater chance of higher returns. Funds with lower volatility tend to have returns that change less over time. They typically have lower returns and may have a lower chance of losing money.
